
BUILT AROUND YOUR EVERYDAY

Six modules. One workspace.

Less searching, more doing. Find the records and tools that keep your work moving.

01 ↗
Customers
Keep customer accounts and payment terms organized.

02 ↗
Products
Manage your catalogue and effective-date prices.

03 ↗
Human Resources
Bring people records and assignments together.

04 ↗
Sales
Keep track of transactions and their line items.

05 ↗
Reports
See the bigger picture with read-only business summaries.

06 ↗
User Management
Manage user accounts and their assigned access rights.

Your next workday, a little simpler.

Role, rights and state handoff

COMMISSION NOTES · OUTSIDE PRODUCT UI

01. Traceability: S1-UM-03, Guide §1.2 rules, §2.1, §3, §4.2, HTML 1059-1111 user forms, 1116-1271 ALL_PERMS/PERM_GROUPS, 1283-1299 sample rights + identities.

02. Superadmin manages roles and approval/designation. Michael Reyes / ceo@hope.com is Superadmin, Sarah Chen / superadmin@hope.com is Superadmin. Lisa Park / admin@hope.com and David Kim / manager@hope.com are Admin. Alex Rivera / user@hope.com is User.

03. Admin cannot see Superadmins; Admin rows have Actions '—'. manage Users only, never assign Admin or Superadmin. User cannot access User Management. Last Superadmin guard is required by plan but absent HTML; protection screen is a separate one active Superadmin scenario.

04. Mockup policy: registration approval/disapproval is Superadmin-only, following the Sprint Plan and S1-UM-04. The supplied HTML permits Admin approval/status changes; do not copy that bypass. Production policy changes need owner confirmation. Account status is not business-record status.

05. 36 rights = 7 Customer + 6 Product + 13 Human Resources + 7 Sales + 7 Reports, matching the Guide and S1-DB4-05. Five separate module View controls govern module access; they are not counted in the 36 right catalogue (4x checkboxes overall). Source difference: HTML ALL_PERMS includes 41 keys; backend mapping of the 5 module access controls must be reconciled with the 36-right catalogue rather than adding 5 extra catalogue rights. All selects View + every child; None clears both. Turning View off clears/disables children, turning it on does not select children. Rights-role selector intentionally absent, role lives in account forms.

06. Save Rights persists draft after server authorization. Cancel/close discards draft; cancelled intent leaves existing rights unchanged. Full catalogue is expanded for inspection; continuation represents scroll movement with header/footer pinned.

07. Alex has customers/products View/Add/Edit, sales View + View Sale details, reports View + Product Master List + Top Sales. No Delete, price mutation, or HR. Prices read-only history is allowed by Products View. Top navigation and Quick Actions use identical checks.

08. Dashboard figures use source denormalization data, not live business results. Added account state examples are separate sample states, not extra source seed accounts. System Settings is referenced only in Guide; scope unresolved, no invented module or controls.

09. Backend must enforce authorization on every request and filter rows and sensitive fields. Hidden UI in static Figma does not implement security.

10. View coverage: authenticated Dashboard is the main page for each role. Landing is a reference only. Admin Rights-modal targets a User (like), Admin cannot manage Admins or Superadmins. Normal Users cannot open User Management or Rights.

11. Rights interaction: open from a User row; dim the underlying list and prevent background interaction. Scroll only the permission region; header and Cancel/Save footer remain visible. Move focus into the dialog, support keyboard navigation, and return focus to the originating control on close. Cancel, close or Escape discards the draft. Save persists only after server authorization.

12. Full catalogue and continuation frames document all 36 action/export rights and 5 separate module View controls; modal views show viewport behavior. All selects the module View and children; None clears both. Save off disables/clears children. Approval grants no module rights automatically.
